NAME

ue-tweaker – Ultimate Edition Tweaker

SYNOPSIS

ue-tweaker

DESCRIPTION

Analyses boot time & allows you to make service adjustments. To make your computer faster.

FEATURES

Ue-tweaker analysez

COMMAND SWITCH USAGE

Every 'flag' option has a 'no-flag' counterpart with exception of help. Specifying no switch is the same as using the −−**help** switch.

If an option or flag is marked as [XXX], it is optional. Options specified with <XXX> are required. They will only work in combination with the XXX option.

OPTIONS

Boottime

−**b** , −−**boottime**

Analyzes the critical-chain, and looks for bottlenecks in your Boot time. Generates a graph of what is slowing down your system. Knowledge of how services work is highly recommend. This app will and can bork your entire Operating System. Be prepared to re-install your O/S if you make an error. You will learn each and every time. I have in the past booted in less then 2 seconds. It is a nasty tool.

Help

Mandatory arguments to long options are identical for short options.

possible commands...

```
-b    --boottime   boottime analysis.
-h    --help       this help message.
-s    --services   tweak services.
-v    --version    dump version info and exit.
```

ue-tweaker −−**help** [Command] for further information.

Services

−**s** , −−**services**

Disclaimer: I am not responsible for your actions. I highly suggest Goggle each and every service before masking it.

Allows the end user 3 options per service. It will prompt you on each and every service if you want to (k)eep, (d)isable or (m)ask service by service. Disabling a service technically is not disabling the service and probably should be the first action if you do not need the service. If the Operating System needs the service will still fire it up. If it is masked no matter what will not fire up that service.

Masking services provides the largest gain in boot speed. For example you do not have a printer and have no intention of getting a printer. Masking cups is a huge gain. I do not think I can word it better then the way I did.

Version

−**v** , −−**version**

Display version number.
